# Audit for

---

Shibbeans

---

## **Audit Details**

**Prepared for: Shibbeans Token**

**Blockchain: Bean Eco Smart Chain (BESC)**

**Project website:  
[shibbeans.online](https://shibbeans.online)**

**Authors: ICSA Audit team**

**Date: 26/04/2023**

## Disclaimer

ICSA audits and reports should not be considered as a form of project's "advertisement" and does not cover any interaction and assessment from "project's contract" to "external contracts" such as Pancakeswap or similar.

ICSA does not provide any warranty on its released reports.

ICSA should not be used as a decision to invest into an audited project please do your own research. ICSA provides transparent reports to all its "clients" and to its "clients,participants" and will not claim any guarantee of bug-free code within its SMART CONTRACT.

ICSA presence is to analyze, audit and assess the client's smart contract's code. Each company or project shall be liable for its own security flaws and functionalities.

### Scope of Work & Background

The main scope of this report/audit, is to document an accurate assessment of the condition of the smart contract and whether it has any security flaws in the implementation of the contract.

\$hibbeans team agreed and provided us with the files that needed to be tested (Through Github, Bscscan, files, etc.). ICSA will be focusing on contract issues and functionalities along with the projects claims from smart contract to their website, whitepaper and repository where available, which has been provided by the project.

Code is reviewed manually and with the use of software using industry best practices.

### Background

ICSA was commissioned by The Shibbeans Token to perform an audit of smart contract:

- Contract Address [0x33D7B3331c3140f67e8ABF97D0a9B79e28842f74](#)

The purpose of the audit was to achieve the following:

- Ensure that the smart contract functions as intended.
- Identify potential security issues with the smart contract.

The information in this report should be used to understand the risk exposure of the smart contract, and as a guide to improve the security posture of the smart contract by remediating the issues that were identified.

## **Token Description from Dev's**

ShibBeans \$ShibB is a cryptocurrency on the Bean Eco Smart Chain (BESC) that rewards its Holders with \$BESC Tokens.

## Contracts details

Token contract details for 30/10/2022

Contract/Project name: Shibbeans

Description: Reward Token

Compiler version: 0.8.4

Contract address: 0x33D7B3331c3140f67e8ABF97D0a9B79e28842f74

Total supply: 10,000,000

Token ticker: ShibB

Decimals: 18

Token holders at time of report: N/V

Transactions count at time of report: N/V

Top 100 holders dominance: N/V

Contract deployer address: 0x64cAF39CA4352E52010E43BFF9c1d17Da955F893

Contract's current owner address: 0x64cAF39CA4352E52010E43BFF9c1d17Da955F893

LP LOCK: Shibbeans Lock 3 months

Dev's KYC: Yes ICSA

Launch Type: Stealth

# Shibbeans LP token holder

N/V

## Contract write functions details

### Owner privileges:

Ownership has not been renounced, The owner has privileges, and has authority to make any changes now.

Current Fees: • Buy: 6% • Sell: 6% • Owner can change fees above 25% (25% is ICSA's recommended maximum).

**All Write Functions of Contract that can be adjusted after the contract is deployed.**

1. approve
2. claim
3. decreaseAllowance
4. excludeFromDividends
5. excludeFromFees
6. excludeMultipleAccountsFromFees
7. includeToWhiteList
8. increaseAllowance
9. openTrade
10. processDividendTracker
11. renouseOwnership
12. setAutomatedMarketMakerPair
13. setExcludeFromAll
14. setExcludeFromMaxTx
15. setExtraFeeOnSell
16. setFee
17. setMarketingWallet
18. setMaxSelltx
19. setMaxWalletToken
20. setSwapToensAtAmount
21. setSafeManager
22. setSwapAndLiquifyEnabled
23. transfer
24. transferFrom
25. transferOwnership
26. updateClaimWallet
27. updateGasForProcessing
28. updateUniswapV2Router
29. withdraw
30. withdrawBNB
31. receive

# SWC Registry: Smart Contract Weakness/Vulnerabilities

<a href="#"><u>SWC-136</u></a>	Unencrypted Private Data On-Chain	PASSED
<a href="#"><u>SWC-135</u></a>	Code With No Effects	PASSED
<a href="#"><u>SWC-134</u></a>	Message call with hardcoded gas amount	PASSED

<a href="#"><u>SWC-103</u></a>	Floating Pragma	LOW ISSUE
<a href="#"><u>SWC-102</u></a>	Outdated Compiler Version	PASSED
<a href="#"><u>SWC-101</u></a>	Integer Overflow and Underflow	PASSED

## Issue Checking

Manual code review is satisfactory.

## CLOSING NOTES

Whilst there are limitless ownable callable functions that have the potential to be dangerous, they are not overtly so. Trust in the team would mitigate many of these risks. Please make sure you do your own research. If in doubt please contact the project team.

Always make sure to always inspect all values and variables.

This includes, but is not limited to: • Ownership • Proper Ownership Renouncement (if any) • Taxes • Transaction/Wallet Limits • Token Distributions • Timelocks • Liquidity Locks • Any other owner-adjustable settings or variables.

# OVERALL ASSESSMENT SATISFACTORY
